

SPIN ULTRA & SPIN ULTRA^{WMN}

33069/350 & 352

PRODUCT POSITIONING

The multi award-winning Spin Ultra is the perfect choice for moderate to ultra distance runs, and has quickly become SCARPA's best-selling trail running model. Hitting the sweet spot between precision and sensitivity and cushioning and protection is not easy, but the Spin Ultra does just that with the dual-density EVA midsole paired with our Vibram Velox LB Max outsole. This combination underfoot, paired with the all-synthetic, lightweight yet supportive upper construction makes the Spin Ultra ideal for just about any trail running adventure, from shorter runs close to home to ultra distance training or races in the mountains, and everything in between. The Vibram outsole features 4mm deep lugs and Megagrip rubber, which offers confidence-inspiring traction in loose dirt and mud, as well as on rock. The mesh and welded PU upper and Sockfit construction is light and breathable but still provides foot-wrapping support and a secure fit. Attention to detail is evident in the less prominent but still functionally key features like the Hidden Lace Pocket and molded TPU toecap. All of these elements come together seamlessly in this go-to, quiver-of-one trail running shoe.

FEATURES AND BENEFITS

- 01 **Mesh & PU Upper:** Breathable mesh with overlays of thermally welded PU film for additional protection, support and abrasion resistance. A molded TPU toe cap adds outstanding toe protection.
- 02 **SOCK-FIT LW:** Stretch fabric incorporated with a minimal stretch tongue provides gentle wrapping and support, reducing bulk and enhancing fit.
- 03 **Hidden Lace Pocket:** Low profile stretch pocket for stowing laces after tying.
- 04 **Midsole:** Dual-density compression molded EVA with ESS insert provides cushioning and support.
- 05 **Outsole:** Vibram® Velox LB Max outsole uses Litebase Technology, with a 50% thinner base, to reduce outsole weight by 30% and incorporates Megagrip rubber compound for increased traction and friction.

SPECIFICATIONS

Upper:	Mesh / PU Film / Micro Nubuck
Lining:	Recycled Polyester
Insole:	Strobel
Midsole:	2D EVA-CM - 6mm Drop
Outsole:	Vibram® Velox LB Max / Megagrip
Last:	Men's - ARS6 Women's - ARS6
Sizes:	Men's - 40-47 (½ sizes); 48 (whole sizes) Women's - 36-42 (½ sizes)
Weight:	Men's - 270g; 9.5oz (½ pair, size 42) Women's - 225g; 7.9oz (½ pair size 38)
Origin:	Vietnam

TECHNOLOGIES

SOCK-FITSystem
BY SCARPA

SPIN ULTRA & SPIN ULTRA^{WMN}**33069/350 & 352****TECHNOLOGY - MATERIALS - CONSTRUCTION**

Vibram® Velox LB Max Sole – The Vibram® Velox LB Max sole package combines a Vibram® outsole with a dual-density compression molded EVA midsole and an ESS insert in the midfoot to deliver the optimal blend of cushioning, traction and protection for a variety of terrains and distances. The outsole itself features Vibram® Litebase Technology to reduce weight, Megagrip rubber for superior grip, and 4mm deep multi-direction lugs for outstanding traction. The midsole is medium density EVA, with softer inserts under the heel and forefoot to enhanced impact absorption. An ESS insert (highly compressed EVA) adds structure and torsional rigidity to the midfoot.

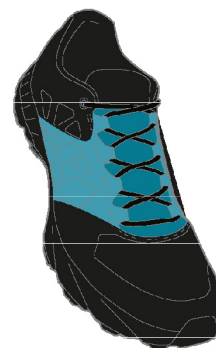

Vibram® Megagrip Rubber – Vibram® Megagrip rubber compound was developed for the most demanding conditions, where grip and friction take priority. Formulated specifically to perform in both wet and dry conditions, Megagrip rubber offers increased friction, with minimal reduction in durability. Megagrip is the ideal rubber compound for demanding activities such as trail running, approach, hiking and canyoneering.

Vibram® Litebase Technology – Vibram® Litebase Technology is an innovative outsole construction that drastically reduces the weight of the outsole, by up to 30%, without compromising performance. This weight reduction is achieved through a unique method of vulcanization in the molding process, during which a thin, rubber coated fabric is incorporated into the base of the outsole, allowing for up to a 50% reduction in overall base thickness, without compromising the durability of the outsole. The lugs themselves are unaffected, allowing the outsole to perform like a standard Vibram® outsole, but at a much lower weight.

Vegan – This SCARPA Vegan symbol and designation is given to products that do not contain any materials sourced from animals or that utilize any kind of animal testing. All of the materials sourced for these Vegan products utilize fully synthetic materials with no components coming from animals, including the glues used in soling.

SOCK-FIT^{LW}
BY SCARPA

Sock-Fit LW System – Sock-fit LW, or “Light Wrap” construction, is the most minimal version of Sock-fit that SCARPA offers. Most of our Trail Running models incorporate this innovative construction. The Sock-fit LW system uses a stretch material combined with a minimal, stretch tongue that wraps both sides and the top of the instep, eliminating the tradition gusset construction, providing gentle pressure and support to both reduce bulk and enhance the fit of the shoe.

**FIT:**

ARS6 last. Medium volume heel and midfoot fit, with a rounded, but slightly tapered toe profile. Good balance between high mileage comfort fit when you want it, but precise when you need it. Fits a lot of foot shapes.
