

PRODUCT POSITIONING

The T4 is a simple, reliable, and comfortable boot, perfect for low-angle touring and smooth skiing performance, making it the go-to choice for old-schoolers and entry-level telemarkers. It features a torsion beam for excellent lateral control, ensuring stability and precision on various terrains. The ergonomic bellows provide a great fit, enhancing comfort and performance. With two easy-lock buckles featuring micro-adjustments, securing the perfect fit is effortless. The ski/walk mechanism allows for seamless transitions between downhill control and touring comfort, making it versatile for different skiing activities. Additionally, the Intuition® Cross Fit BC liner offers durability and comfort, ensuring long-lasting use. The T4 sets the standard for an accessible and dependable telemark skiing experience, blending traditional design with modern functionality to cater to the needs of both seasoned and new telemarkers.

FEATURES AND BENEFITS

- 01 Ergonomic Bellows:** Designed for a great fit, providing enhanced comfort and flexibility during use
- 02 Torsion Frame:** Anti-twist longitudinal bars designed for maximum lateral stability
- 03 Ski Walk Mechanism:** T4 Tour allows you to lock and unlock, making it stiff to control the descent or flexible freedom for touring
- 04 Outsole:** Vibram® Print outsole is made with two different rubber compounds to increase performance while skiing and walking
- 05 Liner:** Intuition® liner is thermoformable and guarantees a warm, precise and comfortable fit.

SPECIFICATIONS

Size:	21.5 -32 (half sizes)
Weight:	1340g; 2lb 15oz (whole size 27)
Shell · Cuff · Tongue:	Pebax® / Pebax® / Pebax®
Liner:	SCARPA Cross Fit BC
Last:	102mm
Ski/Walk Mode:	T4 Tour
Closure:	2 Buckles
Forward Lean:	16°
Range of Motion:	16°
Outsole:	Vibram® Print
Binding System:	75mm
Origin:	Italy

TECHNOLOGIES

TECHNOLOGY · MATERIALS · CONSTRUCTION

Pebax® Elastomers — Designed for extreme conditions, Pebax® elastomers are a premium performance material that has been used for many years in winter sports equipment. They offer a unique combination of high performance properties: sustained flexibility at low temperature, high cold impact resistance, and outstanding energy return. These elastomers are typically 20% lighter than common materials. They combine a polyamide 12 rigid block (PA12) with a hydrophobic polyether soft chain. Bridging the gap between thermoplastics and rubbers, Pebax® materials are an excellent choice for AT ski boots.

Vibram® Outsole — Founded in 1935, Vibram sets the performance standard for outdoor footwear soles. Innovative designs and soling technologies means there is a Vibram sole or rubber compound for all of SCARPA's performance footwear needs. In the SKI category, intelligent lug design combines with Vibram's Top 85 rubber compound to deliver the performance characteristics required by the SCARPA R&D team. Top 85 compound is a rubber compound that has been formulated specifically to provide durability and grip in cold conditions.

Intuition® — Intuition liners are the gold standard for lightweight, warm, thermo-formable ski boot liners. SCARPA is the long time, exclusive partner of Intuition in the alpine touring and telemark categories, bringing you the ultimate in back-country performance, fit and comfort. Intuition liners feature multi-density layups of closed-cell foam that is thermally moldable, allowing you to customize a perfect fit and enjoy the ultimate in comfort, durability and warmth in the backcountry.

Cabrio Construction — **SCARPA's** original touring boot construction, the Cabrio style, 3-piece design, allows you to dial in the fit, adjust the volume in both the toe-box and instep and snug up the cuff. This is a perfect design for telemark skiers looking for both performance and comfort in their boots.
