

PRODUCT POSITIONING

The Kinesis Pro GTX is our premier, fully featured backpacking boot, and one of our best-selling trail models. The classically styled full-grain leather upper is backed by a GORE-TEX® lining for guaranteed waterproof protection, and protected from abrasion by a full rubber rand. The upper is finished off with a soft and supple leather cuff and a micro-pulley system for easy lacing. Modern technology is evident in the dual-density PU midsole, which offers fantastic support and cushioning for carrying a heavy pack over long distances, and a TPU insert adds additional torsion control for variable terrain. The end result is a brilliant combination of old-world aesthetics and new-world performance.

FEATURES AND BENEFITS

- 01** **Upper:** Full-grain leather upper with GORE-TEX® lining offers durable support and is guaranteed to keep you dry.
- 02** **Rand:** Full perimeter rubber rand provides 360 degrees of abrasion protection.
- 03** **Hardware:** Micro-pulley hardware through the midfoot area allows for quick and efficient lacing.
- 04** **Midsole:** Dual-density PU midsole for support and cushioning with a TPU insert for torsion control.
- 05** **Outsole:** Vibram outsole in XS Trek rubber for great traction and durability on the trail.

SPECIFICATIONS

- Upper: 2.4mm Smoothout Leather - PFAS Free
- Lining: **GORE-TEX® Standard ePE - PFAS Free**
- Insole: Activ Plus
- Midsole: 2D PU
- Outsole: Vibram® Biometric / XS Trek
- Last: BD
- Sizes: 40-47 (½ sizes); 48-50 (whole sizes)
- Weight: 850g; 1lb 14oz (½ pair size 42)
- Origin: Italy

TECHNOLOGIES

TECHNOLOGY - MATERIALS - CONSTRUCTION

GORE-TEX® ePE – GORE-TEX® ePE membrane is a revolutionary new waterproof/breathable material that is light, strong and made without PFAS, setting the standard for technical storm protection. This new GORE-TEX® enable a lower carbon footprint through the use of a new lower-mass membrane and selected textiles.

Vibram® Outsole with XS Trek – Vibram® XS TREK is a technical rubber compound that allows great overall performance for outdoor footwear, particularly for backpacking and hiking applications. Its principal characteristics are flexibility balanced with durability, and a higher degree of traction on wet surfaces. Slightly softer than the Mont compound used in Mountain boots, it offers a bit softer feel underfoot while still maintaining extremely high durability characteristics and great friction qualities.

SCARPA Planet Friendly – Our products are used to access the most wonderful and unspoiled landscapes on earth. We feel we must do our best to help preserve these landscapes for both current and future generations. The Planet Friendly designation appears on products designed to tread lighter on the planet, using eco-friendly resources and processes like recycled content materials, vegan friendly sourcing and plant-based plastics.

ACTIVfit SYSTEM

ACTIVfit Technology – ACTIVfit is a construction system that employs different last shapes, material combinations and construction techniques to provide the optimal fit and performance for the intended activity.

Last /Fit Description - BD last / developed as a slightly higher volume last, the BD last offers a medium width and volume heel for great heel hold, a medium width midfoot, and a higher volume instep and a more "square", slightly higher volume forefoot. Best for medium to medium plus volume/width feet.
